

STACKFORGE LABS × STACK

THE PLAN.

*Read it. Keep it. Build on it.
And then, one real problem at a time.*

01 · VERDICT

Go, with a new name and a narrower Stack

02 · MARKET

20 data points on where the money and users are

03 · OPTIONS

Every path for Stack and for the company

04 · ROADMAP

12 months, metrics, risks, first 30 days

THE SHORT ANSWER

Is a company building Stack as its first app a good idea for the market? **Yes, with a narrower Stack.** The market is moving your way. Indians are starting to pay for apps, AI and productivity lead that growth, and Pocket's shutdown left readers looking for a new home. The old working name, "openstack", clashed with a trademark and is now **StackForge**. Stack still tries to be four apps at once. Five decisions:

RENAMED

STACK-FORGE

The company is now **StackForge Labs**. "OpenStack" is a registered trademark of the OpenInfra Foundation (Linux Foundation), so the old working name had to go. StackForge keeps **Stack** at the centre and says what the company does: **it forges (builds) apps on one shared stack**. Finish the trademark and domain checks **before** the Play Store listing and company registration (page 5).

NARROW

STACK

Keep the core that no giant owns: **save anything → highlight → Stack brings it back so you remember it**. Move music and the general news reader to the background. They compete with Spotify and Google News and create legal and policy problems (page 6).

BUILD

OPEN CORE

The company identity should be **"an open, India-first stack of useful apps"**. The apps are free and open source at the core, and people pay for sync, AI and team features. This is how Obsidian, Readwise and many open-source companies earn money, and it builds trust for a new brand (page 8).

SEQUENCE

ONE AT A TIME

Your report lists 14 problem areas. Build them **in order, on one shared engine** ("AI reads → code decides → a person confirms"). Stack first, **BillBook** second (a clear buyer who pays), then **ScamShield** (page 10).

MEASURE

USERS, NOT FEATURES

You've already built six products. The next step is **getting them to people**, not writing more code. Set clear numbers and a date to decide: continue, change or stop (page 12).

ONE-LINE STRATEGY

An open-source, India-first company that turns AI into small, trusted tools for everyday problems, starting with a reading app that makes you remember what you read.

WHAT THE MARKET SAYS

Figures are from public reports as of September 2026. Market-size studies disagree a lot, so treat them as direction, not precision. Every source is listed on page 14.

INDIA • USERS AND MONEY

958M

active internet users in India, growing ~8% a year; rural grows ~4× faster than urban

IAMAI-KANTAR, JAN 2026

\$345M

app spending in India in Q2 2026, **+35% YoY**, the fastest of any major market (US: ~3%)

SENSOR TOWER VIA
TECHCRUNCH

68%

of India's app revenue is now non-gaming (58% three years ago). AI, streaming and productivity lead

SENSOR TOWER, H1 2026

2×

revenue per download has more than doubled in 3.5 years while downloads stayed flat (~6.3B/quarter)

SENSOR TOWER

READING, NOTES AND LEARNING

\$11B → 28B

note-taking app market 2025 → 2030 (~20.5% CAGR). Other studies say \$8–17B today

BUSINESS RESEARCH CO.

Jul 2025

Pocket shut down, and its data was deleted in Oct 2025. Omnivore closed in 2024. Former users moved to Raindrop, Instapaper, Matter and Readwise

MOZILLA • TECHCRUNCH

\$9.99

per month for Readwise Reader, a bootstrapped highlight-and-review app. Third-party estimate: ~\$14M a year in revenue

READWISE.IO • FUELER
(ESTIMATE)

\$7.5B

India edtech in 2025. Test prep is ~25%, upskilling ~20%. PhysicsWallah made ₹2,887 cr in FY25

SKYDO • INDUSTRY REPORTS

AI, TRUST AND INFRASTRUCTURE

1 in 4

Indian startups is now an AI company. Vertical (domain) AI gets 2–3× higher valuations than non-AI peers

TRACXN 2026

\$329M

raised by Indian voice-AI startups by Aug 2026, vs \$12.9M a year earlier. Sarvam became a unicorn in Jun 2026

TRACXN

₹22,495 cr

lost to cyber fraud in India in 2025. 28 lakh cases reported; 75%+ of losses came from investment scams

THEPRINT • I4C DATA

2.9B

Account Aggregator transactions by Jul 2026; 748 lenders and others can request consented bank data

SAHAMATI

RULES THAT CHANGE YOUR PLAN

250K

monthly users that **only registered businesses** must have before Spotify lifts the 25-user limit (since May 2025)

SPOTIFY FOR DEVELOPERS

12 × 14

new personal Play Console accounts need 12 testers opted in for 14 days in a row before going public

PLAY CONSOLE HELP

13 May 2027

deadline for the full DPDP Act (data protection) rules. Consent-manager rules start Nov 2026

MEITY DPDP RULES 2025

File mgrs

Play allows "All files access" mainly for file managers, backup and antivirus apps. A reading app will most likely be refused

PLAY POLICY

SIX TRENDS, SIX MOVES

Each global or Indian trend and what StackForge should do about it.

TREND	EVIDENCE	WHAT WE DO
India has started paying for apps	+35% spend, revenue per download 2×, UPI makes paying easy. Google One and AI apps top the charts	Charge from day one for a small Plus plan (₹99/month or ₹799/year). Don't wait for "scale" to learn whether people will pay
AI moves from chatbots to vertical tools	ChatGPT and Claude earn 83% of India's AI app revenue. VCs pay 2–3× more for domain AI	Don't compete with general chatbots. AI is a feature inside a job : summarise my PDF, quiz my highlights, read this bill
Read-later apps are dying or getting expensive	Pocket and Omnivore are gone. Readwise costs \$9.99/month, too much for most Indian users	Stack becomes the affordable, open-source "read it and remember it" app , with Pocket and Readwise import
Voice and Indian languages go mainstream	Voice-AI funding up ~25×. Sarvam and Bhashini offer Indian-language models	Add Hindi read-aloud and Hindi summaries to Stack. Build voice-first into every later app (BillBook, ScamShield)
India's public digital "stack" keeps growing	UPI, Account Aggregator (2.9B transactions), DigiLocker, ONDC	Later apps plug into public rails instead of scraping. The Cash-flow Report uses Account Aggregator
Privacy and trust are regulated now	The DPDP Act is fully in force by May 2027. There are 28 lakh cyber-fraud cases a year	Local-first + open source = trust . Stack already works without an account. Publish a privacy page and data-export tool

WHO WE COMPETE WITH

APP	WHAT IT DOES WELL	PRICE	STACK'S OPENING
Readwise Reader	Best highlights and spaced review	\$9.99/mo	Around a tenth of the price, Android-first, PDFs + Hindi
Raindrop / Instapaper	Free bookmarking, clean reader	Free + Pro	They save; Stack makes you remember
Google Keep / Notion	Notes everyone already has	Free	Notes are linked to their source and come back for review
Gemini Notebook (NotebookLM)	AI over your documents, quizzes	Free / Google One	Works offline, owns your reading habit, open source. Biggest threat : Google can bundle it free
Anki	Serious flashcards	Free (iOS paid)	No card-making: cards come from your own highlights

THE NEW NAME

STACKFORGE

STACKFORGE LABS · MAKERS OF STACK

The company was called **openstack** as a working name. OpenStack® is a registered trademark of the OpenStack Foundation (OpenInfra), now under the Linux Foundation, so the company is now **StackForge Labs**. Stack stays the main brand: the company *forges* apps, and each one is built on the same shared stack.

WHY IT WORKS

- **Stack comes first**, so the company and its main app share one brand
- **"Forge" = a place where things are built**. It sounds like an engineering company and works in India and abroad
- It fits every future app: **Stack**, **BillBook by StackForge**, **ScamShield by StackForge**
- The block logo (stacked blocks) matches the idea of forging blocks

WATCH OUT

- "StackForge" was also the name of OpenStack's old project area (retired in 2015). It's not an active brand, but check it isn't still registered as a trademark
- Short "stack" names are popular, so **stackforge.com may be taken**. Plan for **stackforge.in**, **stackforgelabs.com** or **stackforge.app**
- Register the company as **"StackForge Labs"**, not just "StackForge", so the name is more distinctive

HOW THE BRAND LOOKS

WHERE	NAME
Company (registration)	StackForge Labs LLP / StackForge Labs Pvt Ltd
Main app	Stack: Read, Keep, Remember
Next apps	BillBook by StackForge · ScamShield by StackForge
Web, GitHub, social	stackforge.in (or stackforgelabs.com) · github.com/stackforge-labs · @stackforgelabs
Android app ID	Stays com.chhari.stack (changing it would make a new app on Play)

NAME CHECKLIST

- ☐ **IP India trademark search** for "StackForge" (ipindiaonline.gov.in) in classes 9 (software) and 42 (SaaS)
- ☐ **MCA name check** for "StackForge Labs" and buy the **.in + one .com/.app** domain
- ☐ Claim the **Play Store developer name**, **GitHub org**, **X** and **Instagram** handles with the same spelling
- ☐ Update the README banner, Firebase display name (project ID openstack-28bf7 can't change, and that's fine) and the store listing

STACK TODAY

Stack is well built: tested on emulators, with offline mode, sync, AI and native Android features. The risk isn't the code. **It's focus, platform rules and getting it to users.**

STRENGTHS

- **Highlight → note → daily review**: the one loop no big app does for free on Android
- Local-first and works without an account: a privacy advantage
- Share to Stack from any app, PDF reader, focus sessions, streaks
- AI already wired in: Summarize, Ask this PDF, Ask your Stack, Tidy note
- Web + Android + tablet from one codebase; backup and restore

WEAKNESSES

- **Four apps in one** (news, music, PDFs, notes), so the store listing can't explain it in one line
- Music and news are the least unique parts, and each fights a giant
- No real users yet, so no data on what people actually use
- AI defaults to Opus, which costs too much for a ₹99 plan
- Solo founder with limited time

BLOCKERS BEFORE LAUNCH

BLOCKER	WHY IT MATTERS	FIX
All files access	Play restricts <code>MANAGE_EXTERNAL_STORAGE</code> to file managers and similar apps. Stack will most likely be rejected	Ship a Play build with the folder picker (SAF) only; keep the "scan all" build for sideloading
Spotify	Capped at 25 users unless you're a business with 250K+ monthly users	Hide Spotify behind "bring your own Client ID" or remove it. Keep phone music for focus sessions
News full text	Reader mode shows other publishers' full articles, a copyright and policy risk	Show headline + summary + link. Full reader only for items the user saved themselves (read-later is common practice)
Play testing rule	12 testers × 14 days before going public (personal account)	Start closed testing this week , or register a company and use an organisation account
AI cost	Opus 5.5 costs \$4/\$20 per million tokens	Default to Haiku 4.5 (\$1/\$5), cache results, and set a daily limit per user
Privacy page	Play requires one, and the DPDP Act will too	Write a simple page: what's stored, where, how to export or delete

FIVE WAYS STACK CAN GO

Scored 1–5 on market size, ease of reaching users, willingness to pay, how well it fits what's already built, and competition (5 = weak competition).

OPTION	WHO & WHAT	MARKET	REACH	PAY	FIT	COMP.
A · Read it & remember it PICK	Students, developers and self-learners in India who save articles and PDFs and forget them. Highlights come back as review and quizzes	■■■■■	■■■■■	■■■■■	■■■■■■	■■■■■
B · Pocket replacement (global)	Former Pocket and Omnivore users worldwide: open-source, cheap, Pocket import	■■■■■	■■■■■	■■■■■	■■■■■■	■■■■■
C · Developer learning workspace	Devs reading HN, dev.to, docs and PDFs; notes that link back to sources; GitHub-friendly export	■■■■■	■■■■■	■■■■■	■■■■■■	■■■■■
D · Stack for institutes (B2B)	Coaching centres, bootcamps and colleges push PDFs to a batch; students highlight, get quizzed; teacher sees progress	■■■■■	■■■■■	■■■■■	■■■■■	■■■■■
E · Keep it all-in-one	News + music + PDFs + notes for everyone, as today	■■■■■	■■■■■	■■■■■	■■■■■■	■■■■■

START WITH A

Largest reachable group, matches what's already built, and the message fits in one line: **"Stack makes you remember what you read."**

ADD B CHEAPLY

A Pocket/Readwise/CSV importer plus an English store listing costs a week and opens global users who pay in dollars.

D ONCE A WORKS

After 1,000+ active users, sell a "batch" plan to 3–5 institutes. This is the most reliable money in Indian edtech.

STACKA, IN ONE PICTURE

1 · SAVE

Share from Chrome, WhatsApp, Telegram, YouTube. PDFs and links land on a shelf

2 · READ

Clean reader + PDF viewer, focus timer, read-aloud (Hindi/English)

3 · HIGHLIGHT

Select a line → note with its source. AI summary on tap

4 · REMEMBER

Morning review: 3 highlights + a 3-question quiz. Streaks, weekly report

Music stays only as background audio in focus sessions. News becomes one optional source of things to save, not a headline feature.

OPEN CORE, PAID EXTRAS

Everything that works on the phone alone stays **free and open source**. People pay for what costs you money to run (sync, AI, storage) and for teams.

FREE · OPEN SOURCE

₹0

- Save, read, highlight, notes
- PDF reader, focus timer, streaks
- Daily review (no AI quiz)
- Backup/restore to a file
- No account needed

STACK PLUS

₹99/mo

or ₹799/year · students ₹499/year · global \$3.99/mo

- Cloud sync across phone, tablet, web
- AI: summaries, quiz from highlights, Ask this PDF
- Hindi read-aloud and summaries
- Weekly learning report

STACK FOR TEAMS

₹30-50

per student per month · min. 50 seats

- Teacher shares PDFs to a batch
- Auto quizzes from the material
- Progress dashboard
- Institute branding

DOES THE MATHS WORK?

COST PER PLUS USER / MONTH	ASSUMPTION	APPROX.
AI on Haiku 4.5 (\$1 in / \$5 out per 1M tokens)	~60 AI actions a month × ~3K tokens in + 500 out ≈ \$0.33, before caching	~₹30
Firebase (Firestore, Auth, hosting)	Light text data; free tier covers the first few thousand users	~₹0-5
Play billing fee	15% on subscriptions	~₹15
Gross margin on ₹99	Before tax and marketing. Caching and daily limits push AI cost lower	~50%+

Exchange rate ≈ ₹88/\$. The same tasks on Opus 5.5 would cost ~4× more and wipe out the margin, so keep Opus for rare, hard tasks only.

TARGETS

1,000

installs by end of Dec 2026

25%

still active on day 30 (a good consumer benchmark)

3-5%

of active users pay for Plus

₹1 lakh

monthly revenue by Sep 2027 (e.g. ~700 Plus + 1 institute)

WHAT KIND OF COMPANY?

Six realistic shapes for the company. They can be combined. The recommended mix is at the bottom.

MODEL	HOW IT EARNS	GOOD	HARD
1 · Product studio	Several small apps on one shared engine, each with a paid tier	Reuses code; a failed app doesn't sink the company	Spread too thin if more than one app is built at a time
2 · Open-source company	Free open core; paid sync, AI, hosting, support	Trust, free contributors, GitHub as marketing	Others can copy; needs a clear line between free and paid
3 · B2B SaaS	Monthly fees from businesses (institutes, accountants, banks)	Bigger, steadier cheques; buyers can say what they need	Slow sales, demos, support, invoices
4 · Services to fund products	Build apps for local shops and startups (you built Orderly, CloseBy, BillBook)	Cash now; finds real problems to turn into products	Eats the time meant for products
5 · Grants and incubators	Startup India Seed Fund (via incubators), state programmes such as iStart Rajasthan, MeitY schemes	Non-dilutive money, mentors, credibility	Paperwork; needs a registered entity and DPIIT recognition
6 · Venture-backed	Raise from angels or VCs to grow fast	Speed, hiring	Needs traction first; pressure to chase scale over usefulness

RECOMMENDED MIX FOR THE NEXT 12 MONTHS

2 + 1 + a little 4. An open-source product studio: one app at a time, the open core as marketing, paid Plus and Teams plans for revenue. Take 1–2 small freelance builds only when cash is needed. Apply for **5** once you have a registered company and 1,000+ users. Consider **6** only after revenue proves people want it.

THE SHARED ENGINE

This is what makes the "stack" name meaningful. Every app reuses the same layers, so app #2 takes weeks, not months.

Capture

Share-in, camera/OCR, PDF, voice (Hindi + English)

AI reads

Summarise, extract fields, explain in simple words (Haiku by default)

Code decides

Rules engines: GST maths, policy limits, scam lists

Person confirms

Clear screens that show why and let the user check

Account & sync

Firebase auth, local-first storage, export/delete (DPDP)

Delivery

Next.js web + Capacitor Android, notifications, backup

THE APPMAP

All 14 ideas from your *India's Real Problems* report plus Stack, sorted by **how much it helps and earns** against **how hard it is for a small team**.

BUILD NOW / NEXT

HIGH VALUE • DOABLE

Stack reading + memory

BillBook GST reconciliation • accountants pay

ScamShield ₹22,495 cr lost in 2025

jobfit already built

LATER, WITH PARTNERS

HIGH VALUE • HARD

ClaimCheck insurance • liability

Cash-flow Report needs Account Aggregator licence partner

Referral Helper medical triage

Case Tracker eCourts captcha, no API

Come back to these only with a doctor, lawyer or NGO partner.

ORDER OF BUILDS

#	APP	WHY THIS ORDER	MONEY
1	Stack	Already built; teaches you launch, billing and support	Plus + Teams
2	BillBook	Clear buyer (CA firms, shops), a real monthly pain, and the plan is already written	₹299–999/mo per firm
3	ScamShield	Huge reach, reuses ScanCart's trust score; free for people, paid API for banks and fintechs	B2B API
4	ClaimCheck	Once there's revenue and a legal review; partner with a TPA or insurance broker	Per check / broker

TWELVE MONTHS

Each quarter ends with a number to hit. If it's missed, the next quarter changes; don't just push the dates.

Q4 2026 · FOCUS & LAUNCH

OCT–DEC

- ☐ Lock in **StackForge**: trademark search, domain and handles; update README and banner
- ☐ Narrow Stack to **Save** → **Read** → **Highlight** → **Remember**; hide Spotify; news becomes a source, not a tab-one feature
- ☐ Fix Play blockers: folder picker build, privacy page, Haiku default, AI daily limits
- ☐ Add **quiz from highlights** + **Pocket/Readwise import**; start **closed testing (12 × 14)** in week 1
- ☐ Public launch on Play + web; open-source the repo; post on Reddit, dev.to, Product Hunt, college groups

Goal: 1,000 installs · 25% active on day 30

Q1 2027 · CHARGE & LEARN

JAN–MAR

- ☐ Launch **Stack Plus** (Play Billing + web with Razorpay); student pricing
- ☐ Hindi read-aloud and summaries; weekly learning report
- ☐ Interview 20 users a month; drop features nobody uses
- ☐ Start **BillBook** discovery: 10 conversations with CA firms and shop owners

Goal: 3,000 installs · first 50 paying users

Q2 2027 · REGISTER & COMPLY

APR–JUN

- ☐ Register an **LLP or Pvt Ltd**; apply for **DPIIT Startup India** recognition; organisation Play account
- ☐ **DPDP compliance by 13 May 2027**: consent screens, data export/delete, breach plan
- ☐ Pilot **Stack for Teams** with 1–2 institutes or bootcamps
- ☐ BillBook MVP with 5 pilot firms; apply to an incubator / Seed Fund

Goal: 200 paying users · 1 paid institute · 5 BillBook pilots

Q3 2027 · DECIDE & EXPAND

JUL–SEP

- ☐ Review: is Stack growing on its own? Then double down. If not, make it a free tool and focus on BillBook
- ☐ BillBook paid launch; start ScamShield prototype on the shared engine
- ☐ First hire or co-founder only if revenue covers ~6 months of costs

Goal: ₹1 lakh monthly revenue across products

NUMBERS TO WATCH

METRIC	WHY IT MATTERS	HEALTHY	RETHINK IF
Day-30 retention	Do people come back after the first excitement?	≥ 25%	< 10%
Reviews done / active user / week	Is the "remember" loop actually used?	≥ 4	< 1
Items saved via Share	Has Stack become a habit in other apps?	≥ 5 / week	< 1 / week
Free → Plus conversion	Will people pay?	3–5%	< 1%
AI cost / paying user	Does each sale make money?	< ₹35	> ₹60

MAJOR PROBLEMS & HOW TO HANDLE THEM

PROBLEM	WHAT COULD HAPPEN	WHAT TO DO
Name / trademark	Forced rename after launch; lost search ranking	Renamed to StackForge; finish the checks on page 5
Big-tech bundling	Google ships Gemini Notebook free with Android	Win on habit, offline use, Hindi, open source and price; stay small and fast
Platform rules	Play rejects the app; Spotify caps users	Folder picker, no Spotify dependency, privacy page (page 6)
Low willingness to pay	Users love it but won't pay ₹99	Student price, yearly plan, UPI; Teams plan for institutes; global pricing in dollars
AI cost and mistakes	Bills grow faster than revenue; wrong summaries	Haiku default, caching, limits; always show the source; "AI reads, code decides, person confirms"
Copyright	Publisher complaints about full-text news	Summaries + links; full text only for saves the user made
Data protection (DPDP)	Fines, loss of trust	Local-first, minimal data, export/delete, consent screens by May 2027
Distribution	Great app, no users; the most common failure	Build in public, open-source repo, college and dev communities, weekly posts, referral rewards
Solo founder, split time	Burnout; job search competes with the company	Fixed weekly hours, one app at a time, look for a co-founder among early users
Doing too much	Building a new app before Stack has users	Rule: no new product until the current one hits its quarter goal

THE FIRST 30 DAYS

Small, concrete steps. By day 30 Stack is in real people's hands and you have your first real numbers.

WEEK 1 · NAME & TESTERS

1–7 OCT

- ☐ Shortlist 3 names → IP India + domain + handle check → pick one
- ☐ Create the Play Console account; upload a folder-picker build to **closed testing**; invite 15+ testers (the clock starts now)
- ☐ Switch the AI default to Haiku 4.5; set a daily limit

WEEK 2 · NARROW

8–14 OCT

- ☐ New home screen: **Continue reading** · **Today's review** · **Saved**. Music moves inside Focus; Spotify hidden
- ☐ News → summary + link; reader only for saved items
- ☐ Privacy page + data export/delete in Settings

WEEK 3 · THE NEW LOOP

15–21 OCT

- ☐ **Quiz from highlights** in the morning review (3 questions, cached)
- ☐ **Import** from Pocket CSV / Readwise / browser bookmarks
- ☐ Simple analytics: installs, day-1/7/30 active, reviews done

WEEK 4 · LAUNCH & LISTEN

22–31 OCT

- ☐ Store listing: **"Stack: Read, Keep, Remember"**, 5 screenshots, 30-second video
- ☐ Open-source the repo with a clean README; post a build story on dev.to, Reddit and LinkedIn
- ☐ Talk to 10 users; write down the top 3 complaints; fix only those

RULES FOR YOURSELF

1 · No new features until 10 real users have given feedback. 2 · One product at a time. 3 · Every change must make **save** → **highlight** → **remember** better. 4 · Look at the numbers every Sunday.

SOURCES

Market-size reports come from paid research firms and often disagree. Figures marked "estimate" come from third-party blogs, not the company. The AI prices are Anthropic's list prices from September 2026.
