2 NOV
Decide

NOVEMBER
Public launch

THE ROUTE

A **soft launch** means real people outside your own circle use Stack, but only a small group you choose. This plan opens it in **8 to 10 days: between 8 and 10 October**.

#	PHASE	WHAT HAPPENS	DONE WHEN	DATES
0	Finish the build	Sign-in, sync, Stack AI and Sarvam live. The first build goes to Google on 4 Oct	Every gate on page 3 is green	1–5 Oct days 1–5
1	Internal test	You and 2 or 3 friends, through Play's internal track	Sign-in, sync and AI work on 3 real phones on mobile data	6–7 Oct days 6–7
2	Soft launch	Play's closed test opens by a join link to the waitlist and a few study groups: 50 to 150 people	12 or more stay opted in for 14 days in a row, and you have two weeks of numbers	opens 8–10 Oct runs to 24 Oct
3	Google's review	Apply for production on day 15 of the closed test	Google grants production access	24 Oct – about 1 Nov
4	Decide	Go, fix or rethink, from the numbers on page 7	A written decision	2 Nov
5	Public launch	The Store listing opens to everyone at 20%, 50%, then 100%. Launch posts, Product Hunt	The plan's goal: 1,000 installs by end of December	November

WHY NOT THE OPEN STORE IN 10 DAYS

Google's 14-day rule

A new personal Play account must run a closed test with 12 testers for 14 days in a row before the app can be open to everyone. Nothing in this plan can shorten that. So the soft launch **is** the closed test: people join by a link, install from Play, and the 14 days count at the same time.

WHAT CAN MOVE THE DATE

Google's first review

Google reviews the first closed-test build, and that can take a few days. Upload it on **4 October**, before the AI work is finished, so the review runs while you build. If it is still not approved on day 8, start with Play's internal track, which takes up to 100 people and needs no wait.

The dates assume your Play Console account is already verified, which I could not check. If it is not, verification comes first and every date moves by the days it takes.

WHAT CHANGED SINCE THE LAUNCH GUIDE

TOPIC	THE OLD GUIDE (29.09.2026) SAID	NOW
Backend	Firebase for sign-in, sync and files	Supabase for all three. Keep the old Firebase project: it owns the Google sign-in clients and the website's waitlist
Where AI runs	A Next.js route on Vercel	A Supabase Edge Function named <code>ai</code> . The app needs no web server of ours
AI engines	Claude only	Sarvam for text jobs in Indian languages, Claude or OpenAI for PDF chat
Play build	To be written	<code>build-aab.sh</code> exists and leaves out "All files access". Version is 1.0.0 (code 10000)

FINISH THE BUILD

Twelve gates in date order. The first seven get a build to Google by 4 October. **You** = a dashboard or key only you can reach. **Code** = work in the repo.

#	GATE	WHO	BY	DONE WHEN
1	Google sign-in on a real phone	You	2 Oct	The Web client ID is under Supabase → Authentication → Providers → Google → Client IDs, and a real Google account signs in
2	Sync between two phones	You	2 Oct	A note written on one phone appears on the other
3	Public privacy and delete pages	Code	3 Oct	The website has /privacy today but no /delete-account page. Play needs a public link for both. The privacy page names Supabase, Sarvam and the second AI engine
4	Signed release build	You + Code	3 Oct	./build-aab.sh makes an .aab signed with your upload key, from committed and tagged code. The Supabase work is still uncommitted on website-update-oct
5	Play forms and listing	You	4 Oct	Everything on page 5 is filled in
6	First build uploaded	You	4 Oct	The build is on the internal track and sent for review on the closed track. AI can still be hidden in this build
7	Google sign-in for Play installs	You	4 Oct	Google Cloud has an Android OAuth client for the upload key's SHA-1 and for Play's app-signing SHA-1, which appears after the first upload. Without them sign-in fails on Play installs
8	Stack AI is live	You	5 Oct	The ai function is deployed with its secrets, NEXT_PUBLIC_AI_URL is filled in, and a summary works in the app
9	Sarvam engine	Code	5 Oct	Summary, Tidy and Ask your Stack run on Sarvam; PDF chat runs on Claude or OpenAI; the app names both engines before sending anything
10	Cheap models, limit, caps	You	5 Oct	No feature uses Claude Opus or GPT-5.5 by default. AI_DAILY_LIMIT=10. The Claude or OpenAI account has a monthly limit of about \$10; Sarvam is prepaid
11	"Report this answer"	Code	6 Oct	Every AI answer has a way to report it. Google Play asks for this in apps that make AI content
12	Password-reset emails	You	6 Oct	Your own SMTP sender is set in Supabase. Its built-in sender sends only a few emails an hour

LEFT OUT OF THE FIRST TEN DAYS

SHIPS DURING THE SOFT LAUNCH

Updates, not blockers

"Summarise in Hindi", "Explain simply", exam shelves, the app in Hindi. Each goes out as an update. Gates 8 to 11 go up as a second build on 6 October with a higher version code.

FREE PLAN

Two Supabase limits to know

A free project pauses after about a week with no activity: press **Restore** in the dashboard. The free plan also has about 1 GB of file storage and Stack syncs PDFs of up to 50 MB, so check the storage figure every few days.

THE FIRST PEOPLE

The people in the soft launch are also Google's testers: **12 of them must stay opted in for 14 days in a row.** Invite many more than 12, and give them something to do.

1

Internal test on three phones

6-7 OCT

You and 2 or 3 friends install from Play's internal track. On mobile data: sign in with Google, save a note, see it on a second phone, summarise an English and a Hindi article, ask one PDF a question, sign out and in again.

2

Open the soft launch

8-10 OCT

Make a Google Group and set it as the tester list of the closed track. Anyone who joins the group can install from Play, so one link is all you share. Send it first to the website's waitlist: the sign-ups are in the old Firebase project, in the Firestore collection `waitlist`.

3

Ship an update every week

10-24 OCT

Fix the top complaints and upload again. Google looks at whether you tested and improved the app.

4

Apply for production

DAY 15 · ABOUT 24 OCT

Google asks how you found testers, what they said and what you changed. Answer from the form below. Review usually takes about a week.

WHAT TO ASK PEOPLE TO DO

DAY	TASK	WHAT YOU LEARN
1	Sign in. Save three articles or PDFs and highlight one line	Does sign-in work on every phone? Is saving obvious?
2	Summarise one article in English and one in your own language	Is Sarvam's Hindi, Tamil or Bengali good enough to trust?
3	Do the morning review	Does the "remember" loop start?
5	Ask a question about a PDF you study from	Are the answers right, and do the page links help?
7	Fill a short form (below)	The words you will give Google on day 15
10	Share to Stack from WhatsApp, Chrome or Telegram	Does Stack become a habit inside other apps?
14	One question: "How would you feel if you could no longer use Stack?"	Whether there is anything they would miss

DAY 7 FORM

- What did you use most? What confused you?
- Was an AI answer ever wrong? Paste it
- Which language do you read in? Was the summary good in it?
- What do you study for? Which apps do you use for it today?
- Would you pay ₹99 a month? For which part?
- How did you hear about Stack?

WHAT TO WATCH YOURSELF

- Sign-ups: Supabase → Authentication → Users
- Who syncs: rows in the `items` table
- AI use: the `ai_usage` table keeps only today's rows, so note the numbers each evening
- Money spent: the AI dashboards. Opted-in testers: Play Console

PLAY CONSOLE, UPDATED

The forms from the old guide, with new answers where Supabase and the two AI engines change them. Fill them before you upload the first build on 4 October.

FORM	WHAT TO ANSWER NOW
Privacy policy	The public /privacy link on your website. It must name Supabase (accounts, notes, PDF files), Sarvam AI and the second AI engine
Account deletion	A public /delete - account link. The app can already delete the account from inside (Settings → Account)
Data safety	Collected: email and name (account); notes, highlights and PDF files if the person turns on sync. Shared for processing: text and PDFs the person sends to Stack AI go to Sarvam AI and to Anthropic or OpenAI. Encrypted in transit: yes. Deletion: yes. When voice ships, add audio
AI-generated content	Say that Stack makes AI summaries and answers, that the person is asked before anything is sent, and that each answer can be reported
App access	"The app works without login. Sync and Stack AI need sign-in." Give Google a test account with AI switched on
Foreground service	Media playback, for music and Listen mode, with a short screen recording
Category	Education or Productivity. Not "News & Magazines"
Countries	India only for the soft launch. Add countries at the public launch

THE STORE LISTING

ENGLISH (INDIA) · MAIN LISTING

Stack: Read, Keep, Remember

Short description (75 of 80 characters):

Save articles & PDFs, highlight, and remember them. Summaries in Hindi too.

Screenshots in this order: Save → Highlight → Morning review → AI summary in Hindi → Ask this PDF.

HINDI LISTING · ADD AS A TRANSLATION

Stack: पढ़ो, सहेजो, याद रखो

लेख और PDF सहेजें, हाइलाइट करें और याद रखें। सारांश हिंदी में भी।

Play shows this listing to phones set to Hindi. Ask a Hindi reader to check the wording before you publish it.

SAY ONLY WHAT IS TRUE IN THE BUILD

"Summaries in Hindi" may go in the listing only once that feature is in the build people install. Until then use: "Save articles & PDFs, highlight, and actually remember what you read." Play can reject a listing that promises features the app does not have.

THE SOFT LAUNCH

Two weeks through Play's closed test, with the brakes on. The goal is **50 to 150 people and honest numbers**, not a big day.

First 30 people

8–12 OCT

- ☐ Send the join link to the waitlist and to friends who read a lot
- ☐ Watch sign-in and crashes every day
- ☐ Reply to everyone the same day
- ☐ Check 12 or more are opted in

Up to 100

13–18 OCT

- ☐ Share the link in 2 or 3 college or study groups you belong to
- ☐ Ship one update from the top complaints
- ☐ Send the day 7 form
- ☐ Raise the AI limit only if the bill allows

Up to 150

19–24 OCT

- ☐ One post on your own LinkedIn or X, with the join link and a short video
- ☐ Interview 10 users for 15 minutes each
- ☐ Collect the numbers for page 7
- ☐ Apply for production on day 15

TELL/DO NOT TELL YET

TELL NOW

- The website waitlist
- Friends and classmates who read or study every day
- Two or three college, coaching or Telegram study groups
- People who read in Hindi or another Indian language

KEEP FOR THE PUBLIC LAUNCH

- Product Hunt, Reddit and dev.to posts
- Making the GitHub repo loud (it can stay public and quiet)
- Countries outside India
- Any paid promotion

AI BRAKES

BRAKE	SETTING FOR THE SOFT LAUNCH	HOW TO CHANGE IT WITHOUT A NEW APP
Daily limit per person	10 a day. Worst case on Sarvam is about ₹1 per person per day	The AI_DAILY_LIMIT secret in Supabase
Model per feature	Sarvam for text; the cheapest Claude or OpenAI model for PDFs	The model secrets in Supabase
Prepaid credit	₹500 on Sarvam after the free ₹100; \$10 a month on the second engine	Top up in each dashboard
Off switch	If something goes wrong, remove the AI key	The app then shows "Stack AI isn't set up on the server yet" and everything else works

EVERY DAY, 15 MINUTES

Reply to every message and every piece of Play feedback. Look at crashes in Play's Android vitals. Look at the Sarvam balance. Write down sign-ups, opted-in testers and today's AI users. Every Sunday, one hour: the numbers on the next page.

NUMBERS & GATES

Decide from numbers written down every Sunday, not from how the launch feels. The targets are rules of thumb; the two Play thresholds are Google's own.

NUMBER	WHY IT MATTERS	HEALTHY	FIX FIRST IF
Crash rate (Android vitals)	Above Google's threshold, Play shows the app to fewer people	under 1%	over 1.09%
ANR rate (app freezes)	The same rule, for freezes	under 0.4%	over 0.47%
Sign-in success	AI and sync need an account	95% or more	under 85%
Still active on day 7	Do people come back after the first look?	25% or more	under 10%
Reviews done per active user per week	Is the "remember" loop used? (from the business plan)	4 or more	under 1
Signed-in users who try AI	Is AI worth its cost and its consent screen?	30% or more	under 10%
Summaries asked for in an Indian language	Is Sarvam earning its place?	20% or more	almost none
AI cost per active user per day	Can the free tier last?	under ₹0.50	over ₹1
AI answers reported as wrong	Trust	under 2%	over 5%
"Very disappointed" without Stack (day 14)	A common test of whether people need a product	40% or more	under 20%

Closed-test users cannot leave public Play reviews; their feedback reaches you privately in Play Console. Stack also has no usage counter yet for "active on day 7" and "reviews done": add a small counter to the sync data, or use Play Console's own figures and ask the ten people you interview.

THE DECISION ON 2 NOVEMBER

GO PUBLIC LAUNCH	Most numbers are healthy and nothing is in the "fix first" column. Open the Store listing to everyone at 20%, then 50%, then 100%. Publish the launch posts, go on Product Hunt, and start building Stack Plus with Play Billing.
FIX TWO MORE WEEKS	One or two numbers are in "fix first". Keep the closed test running, fix only those, and look again in two weeks. A late public launch costs less than a loud launch of a broken app.
RETHINK WHO IS IT FOR?	People install and do not come back (day 7 under 10%). Do not add features. Interview ten people who left, go back to the market research on page 9, and change the core loop or who Stack is for.

MONEY & CALENDAR

COST	AMOUNT	NOTE
Play Console account	\$25 ≈ ₹2,200	One time
Domain	≈ ₹1,500 a year	For the website, the support email and the email sender
Supabase	₹0	The free plan. The Pro plan is \$25 a month if storage or pausing becomes a problem
Sarvam AI	₹0, then ₹500	₹100 free credit covers testing. One ₹500 top-up for the soft launch
Claude or OpenAI, for PDF chat	up to \$10 ≈ ₹880	A monthly limit set in that account
Total to reach the soft launch	about ₹5,000	Then roughly ₹500 to ₹1,500 a month in AI while Stack is small

Worst case for AI in the soft launch: 150 signed-in people each using all 10 requests a day on Sarvam is about ₹150 a day. Real use is normally a small part of that; the prepaid credit stops it either way.

DAY BY DAY

Days 1–3 · 1–3 Oct · Make it installable

PHASE 0

- ☐ Fix Google sign-in; test sync on two phones; /delete - account and privacy pages; commit and tag; signed release build
- ☐ Research evenings: areas 1, 2 and 6 on page 9

Days 4–5 · 4–5 Oct · Send it to Google, switch on AI

PHASE 0

- ☐ Play forms and listing; **upload the first build on 4 October**; add the Play SHA-1s to Google Cloud
- ☐ Deploy the ai function; add the Sarvam engine; cheap models; limit 10; spending caps

Days 6–7 · 6–7 Oct · Test it yourself

PHASE 1

- ☐ "Report this answer"; email sender; second build with AI
- ☐ Internal test on three phones, on mobile data

Days 8–10 · 8–10 Oct · Soft launch opens

PHASE 2

- ☐ Join link to the waitlist and friends: the first 30 people
- ☐ To 24 Oct: up to 150 people; one update a week; day 7 form; ten interviews; research areas 3, 4, 5, 8 and 9

24 Oct → November · Review, decide, launch

PHASES 3 TO 5

- ☐ Apply for production on day 15; decide on 2 November; on "go", open the Store listing in steps

MARKET RESEARCH

Ten areas to research for this launch. Each one ends in a decision. The business plan covers the size of the market; these are the questions it could not answer.

#	AREA	WHAT TO FIND OUT	HOW, AT NO COST	THE DECISION IT FEEDS
1	Who exactly	Which group has the strongest daily reading habit: exam aspirants, college students, working developers? Where do they gather?	Ten 15-minute calls. Note the member counts of 20 Telegram and WhatsApp study groups	The one group the soft launch is aimed at
2	What they use today	Readwise, NotebookLM, Notion, Keep, Anki, PDF readers, exam apps, Telegram itself: price, rating, complaints	Read the 1 to 3 star Play reviews of ten apps. List the top five complaints of each	Stack's one-line promise and the first three screenshots
3	Language	Which languages your group reads and studies in. How good Sarvam's summaries are in each	The day 7 form. Run 20 real articles per language and read every summary	Which language ships first after Hindi
4	Willingness to pay	What they pay for today: coaching, test series, apps. Would they pay ₹99 a month or ₹499 a year, and for which feature?	The day 7 form and the interviews. Competitors' price pages	The Plus price, and what stays free
5	Channels	Where this group finds new apps: Telegram channels, YouTube teachers, college groups, Play search	Ask every user "How did you hear about Stack?". List 20 groups and channels with size and admin	Where the public launch is announced
6	Play Store search	What people type: "pdf reader with notes", "read later", "UPSC notes", "highlight", and the same in Hindi. Who ranks for each	Search each phrase in Play. Note the top five apps, their installs and ratings	The app title, short description and category
7	Coaching institutes	Do small coaching centres share PDFs digitally? Would they pay ₹30 to ₹50 per student a month?	Five conversations with teachers or centre owners	Whether Stack for Teams comes before or after Plus
8	Phones and networks	Which phones, Android versions and free storage your group has. How often they are offline	Play Console's device figures. One question in the form	Which phones to test on, and how small the app must stay
9	AI cost and trust	The real AI cost per active user. Where answers are wrong. Whether people trust a Hindi summary	The Sarvam and Claude dashboards, the report button, the interviews	The free daily limit, and which engine does which job
10	Rules	Play's rules on AI content, news and permissions. The DPDP Act. Publishers' feed terms. Copyright on books	Play Console Help. One hour with someone who knows Indian app law	What must change before the public launch

WHEN

Before day 8: areas 1, 2 and 6, in three evenings. They decide who gets the join link and what the listing says. **During the soft launch:** areas 3, 4, 5, 8 and 9, which need real users. **Before the public launch:** areas 7 and 10.

On 2 November have one page in your own words: who Stack is for, what they use today and why they would switch, the price they will pay, and the three channels that reach them.

THE CHECKLIST

DAYS 1–5 · FINISH THE BUILD

- ☐ Google sign-in works on a real phone
- ☐ A note syncs between two phones
- ☐ Public /privacy and /delete-account pages
- ☐ Work committed, merged and tagged
- ☐ Signed .aab; version code raised
- ☐ Play forms filled; Data safety names both AI engines
- ☐ Listing ready; countries set to India only
- ☐ **First build uploaded on 4 October**
- ☐ Android OAuth clients for both release SHA-1s
- ☐ ai function deployed; AI address in .env.local
- ☐ Sarvam engine added; PDF chat on the second engine
- ☐ Cheap default models; daily limit 10; spending cap

DAYS 6–7 · INTERNAL TEST

- ☐ "Report this answer" on AI answers
- ☐ Own email sender set in Supabase
- ☐ Second build, with AI, uploaded
- ☐ Passed on three phones, on mobile data
- ☐ Research areas 1, 2 and 6 written up

DAYS 8–10 · SOFT LAUNCH OPENS

- ☐ Google Group made and set as the tester list
- ☐ Join link sent to the waitlist and friends
- ☐ 12 or more people opted in

11–24 OCT · RUN IT

- ☐ Daily 15 minutes; Sunday numbers written down
- ☐ Study groups told; one update a week
- ☐ Day 7 form collected; day 14 question asked
- ☐ Ten user interviews done
- ☐ Research areas 3, 4, 5, 8 and 9 written up
- ☐ Applied for production on day 15

2 NOVEMBER → DECIDE AND LAUNCH

- ☐ Numbers compared with page 7
- ☐ One-page market summary written
- ☐ Decision written: go, fix or rethink
- ☐ On go: Store listing opened at 20%, 50%, 100%

WHEN THINGS GO WRONG

PROBLEM	WHAT TO DO
Google's review is not done on day 8	Start with Play's internal track: add up to 100 people by email and they can install at once. Move them to the closed track when it is approved. The 14 days count only on the closed track
Fewer than 12 people stay opted in	The 14 days do not complete. Invite more people the same day and keep the test running
Google sign-in fails on Play installs	The Android OAuth client for Play's app-signing SHA-1 is missing in Google Cloud (gate 7)
Nobody can sign in or sync	The free Supabase project may be paused. Open the dashboard and press Restore
The AI bill jumps	Lower AI_DAILY_LIMIT in the Supabase secrets. It takes effect at once, with no new app
Hindi summaries are poor	Send Indian-language summaries to the second engine for now, and report examples to Sarvam
Play rejects the build	Read the email, fix only that item, and reply through the Policy status page

Sources: Stack_Launch_Guide.pdf and StackForge_Stack_Plan.pdf (same folder); the project's supabase/README.md; Sarvam prices from sarvam.ai/api-pricing on 01.10.2026; live checks of the Supabase project on 01.10.2026. Play rules change often: check Play Console Help before each phase.
