Where Sarvam AI fits

05
When it says no · what is live

TWO NAMES, ONE PATH

Stack AI is the feature inside your app: the buttons and Stack's own server. **Sarvam AI** is an engine, a company whose model writes the answer. The app never talks to an engine directly. Every request takes the same path.

WHAT EACH PART IS

IN THE APP

Stack AI buttons

Summarize, Ask this PDF, Ask your Stack and Tidy. Each asks you once before it sends anything.

ON SUPABASE

Stack's server

The gatekeeper. It protects the paid key and stops one person from using up the budget.

OUTSIDE

The engines

They only write text. They can be swapped on the server without a new app release.

STACK AI VS SARVAM AI

	STACK AI	SARVAM AI
What it is	A feature of your app	An AI company's model, used as an engine
Who owns it	You (StackForge Labs)	Sarvam, an Indian AI company
Where it runs	In the app and on your Supabase project	On Sarvam's servers
What the user sees	The sparkle buttons and the answers	Nothing new. Only the name in the "ask first" sheet
Status	Built , not switched on	Not connected yet

CHECKED TODAY, 01.10.2026

None of this is live yet. The ai function is not deployed (its address answers 404) and the app has no AI address, so the AI buttons are hidden in today's APK. Sarvam AI is not in the code. Page 6 shows how to switch it on.

THE FOUR AI BUTTONS

Stack AI has four jobs, each on a different screen. The red ring marks what you tap. Every AI button carries the same sparkle icon ✨.

ARTICLE READER

Summarize

Three short points and one takeaway, at the top of the article.

SENDS The article's text

GETS A summary you can save as a note

PDF READER

Ask this PDF

A chat about the open PDF. Tap a page chip to jump to that page.

SENDS The PDF file (up to about 22 MB) and your question

GETS An answer with page links

SEARCH

Ask your Stack

Answers a question from your own notes and highlights, and links to each one it used.

SENDS Your question and up to 30 matching notes

GETS A short answer with note links

NOTE EDITOR

Tidy

The sparkle in the bottom bar. Fixes spelling, adds a title, bullets or a checklist. Undo puts the old note back.

SENDS This note's text

GETS The same note, cleaned up

ONE SWITCH FOR ALL FOUR

06 — STACK AI

Stack AI

Summaries, PDF questions, Ask your Stack and Tidy note. Asks before sending anything.

Runs on OpenAI through Stack's server, only when you tap an AI button.

SETTINGS → 06 STACK AI

Off means off.

Every AI button disappears from all four screens and nothing is sent. Nothing ever runs by itself: the AI works only when you tap one of these buttons. The last line names the engine in use; today's build says OpenAI.

The phone drawings follow the app's own code (`src/components/ai-*.tsx`). The article, note and answer text inside them is sample text.

ONE TAP, STEP BY STEP

What you see when you tap **Summarize**, and what happens behind the screen. The other three buttons work the same way.

WHAT YOU SEE

WHAT HAPPENS BEHIND THE SCREEN

WHERE SARVAM AI FITS

Sarvam AI goes in as a **third engine on the server**. The app's screens stay the same. The server sends each job to the engine that does it well for the least money.

NEW SCREENS SARVAM MAKES POSSIBLE

DASHED FRAMES ARE IDEAS. NONE OF THESE FOUR EXISTS IN THE APP TODAY

IN SHORT

Stack AI is the door; Sarvam AI is one of the rooms behind it. Sarvam also reads scanned pages into text (Sarvam Vision) and translates. Costs, prices and the build order are in `Stack_AI_and_Sarvam_AI.pdf`, in the same folder.

WHEN IT SAYS NO

Each check on the path can stop a request. The app then shows one short line in red where the answer would be. These are the exact messages in the code.

STEP 3 · NOT SIGNED IN

Sign in to use Stack AI. [Sign in](#)
The link opens the Account screen.

STEP 4 · LIMIT REACHED

You've used today's 50 Stack AI requests. They reset at midnight (UTC).
That is 5:30 AM in India.

STEP 2 · NO INTERNET

Couldn't reach Stack AI. Check your connection.
The rest of Stack works offline.

STEP 5 · ENGINE OUT OF CREDIT

Stack AI is paused: the AI account is out of credit.
Top up the engine's account.

STEP 5 · ENGINE BUSY

Stack AI is busy. Try again in a minute.
Too many requests at once.

ASK THIS PDF · FILE TOO BIG

This PDF is too big to send (the limit is about 22 MB).
Smaller PDFs work.

WHAT IS LIVE TODAY

CHECKED 01.10.2026 AGAINST THE PROJECT FOLDER AND THE SUPABASE ADDRESS

PART	STATUS	WHAT IT MEANS
The four AI screens	Built	Summarize, Ask this PDF, Ask your Stack and Tidy are in the app's code
Stack's server (the <code>ai</code> function)	Written	Sign-in check, daily limit, OpenAI and Claude engines
The function on Supabase	Not deployed	Its address answers 404, so nothing can reach it
AI address in the app	Empty	<code>NEXT_PUBLIC_AI_URL</code> is blank, so the AI buttons are hidden in today's APK
Sarvam AI engine	Not built	No Sarvam code in the project yet
Hindi summary, voice, listen	Ideas	The dashed screens on page 5

THREE STEPS TO SWITCH IT ON

1 Deploy the function

Put the `ai` function on Supabase and give it one engine key and a low daily limit.

You · about 20 minutes

2 Tell the app

Put the function's address in `.env.local` and rebuild the APK. The AI buttons appear.

You · one rebuild

3 Add Sarvam

Add the Sarvam engine to the function, plus a setting for each job so PDF chat stays on OpenAI or Claude.

Code · about half a day

Sources: `src/lib/ai.ts`, `src/components/ai/*.tsx`, `supabase/functions/ai/index.ts`, `supabase/schema.sql`. Sarvam's model names and abilities are taken from `Stack_AI_and_Sarvam_AI.pdf` (read from Sarvam's site on 01.10.2026) and were not checked again for this diagram. The exact commands for steps 1 and 2 are on page 7 of that guide.
